

David M. Cotter, P.E.

Title Engineering Group Manager

Registrations Registered Professional Engineer (MA)

Education B.S., Mechanical Engineering Technology, Wentworth Institute of Technology

Experience As Engineering Group Manager, Mr. Cotter is responsible for managing the engineering group as well as all air quality related services for our clients. He has over twenty years of environmental engineering experience with a focus in the air quality field. His experience includes completion of numerous projects in ambient monitoring, source testing, air permitting, air dispersion modeling, transportation air impact analyses, emissions inventories, compliance audits, and air pollution control analyses. Mr. Cotter provides professional consultation to various industrial and institutional clients related to compliance to federal and state air pollution control regulations.

Mr. Cotter consults with his clients on the best strategies to achieve and maintain compliance with air quality control regulations. He has prepared countless regulatory interpretations and has consulted with clients on the implementation of environmental management programs to track air permit reporting and recordkeeping requirements. These programs have utilized both Microsoft Excel and Microsoft Access databases to track daily, monthly, and annual usage of materials for calculation of air emissions.

Mr. Cotter was the air quality lead on multiple compliance audits conducted at Federal Bureau of Prison and United States Postal facilities across the United States. Mr. Cotter was also the air quality lead on the Programmatic Environmental Impact Statement completed for the Department of Energy for the handling and disposal of radioactive waste materials.

Memberships Air and Waste Management Association - member since 1992
