

Environmental, Health and Safety Auditing and Compliance

Would you like to clarify your company's strengths and weaknesses, identify opportunities for improvement, prioritize corrective action and create an excellent business risk and liability management tool all at the same time?

CAPACCIO's audits will help your company meet its regulatory obligations for system and program review and also provide valuable insight into the inner-workings of your business. Our audits are conducted with standard questionnaires and specific audit protocols as recommended by the U.S. Environmental Protection Agency (EPA), an excellent method to demonstrate compliance. Guidance for standardization is provided by provisional ASTM Standard E2365-05 Standard Guide for Environmental Compliance Performance Assessment, ISO Standard Guidelines for Environmental Auditing (ISO14010:1996), and ASTM Standards on Environmental Assessment.

BENEFITS

- Discover risks before they become liabilities
- Show due diligence to regulators and customers by a proactive approach to managing your EH&S risks
- Understand EH&S system weaknesses in order to continually improve processes
- Qualify to use regulatory "self-disclosure policies," therefore reducing chances of fines and penalties.

SERVICES

Audit Types

- Permit and regulatory compliance
- Waste minimization/pollution prevention
- Hazardous waste disposal facility risk assessment
- Environmental due diligence

- Third party certification
